

# JD - Data Engineer (Azure Focus)

## Role Summary

We are looking for a Data Engineer with strong experience in building data pipelines and integrating data from various sources using Azure services. The ideal candidate will be responsible for designing and implementing scalable data architectures, ETL processes, and data quality frameworks.

## Additional Requirements

- Experience with data ingestion and transformation
- Knowledge of data governance and security best practices
- Familiarity with Agile/Scrum development processes
- Good communication skills and ability to work cross-functionally
